INTEREST TABLES,

BY

SAMUEL J. KELSO,

DETROIT, MICHIGAN.

PRICE, - - - \$1.00.

A manilla paper covered copy will be mailed on approval to any business man, on request. If satisfactory, remit \$1, on receipt of which a well bound copy will be returned, with full letter postage, and directed postal card enclosed, for acknowledgment. If not satisfactory, return the paper covered copy in the same wrapper received, paying the return postage or not, at option.

THESE TABLES CONTAIN

1. "One Page—One Rate" Tables for 6, 7, 8 and 10 per cent.
2. "Every Rate" Table—being a 1 per cent. Table.
3. Table for the conversion of "360" to "365" interest.
4. Tables A and B for facilitating the handling of fractions.

These are tables for which hundreds have doubtless sought in vain, to wit, *Accurate Tables*, in such form that they may be laid open on the desk, and so arranged as to be readily consulted by the eye, without calling for the use of hands and mind to turn over pages and pick out of battalions of figures the interest required.

Reference is made to the section of the 10 per cent. Table and examples below.

27—	1000	2000	3000	4000	5000	6000	7000	8000	9000

The system is best explained by making an analysis of a single tabular item. Look at the 10 per cent. Table, and notice opposite "19 days" and under 9000, 4750. This means that the interest at 10 per cent. for 19 days, on \$9000, is 4750 cents, or \$47.50. The arrangement of the figures is such that we have also the interest for the same time and rate on \$900—475 cents.

on	90—	47.5	"
on	9—	4.75	"

Therefore, to use these tables, look in the lines opposite the given time for the component parts of the principal, and under each component part is found the interest on it, in cents, the total of which is the required interest.

By taking a figure to the right, as is done in the examples, interest is found true to mills.

N. B.—All the examples here given on the "One rate—One page" Tables, on the 1 per cent. Table, and those given on Tables A, B and C, and many other examples selected as the most knotty, likely to arise in business, have been correctly taken off with the greatest ease by a boy of 9 years of age. Any person can learn to use these tables in a few moments, by taking the trouble to follow the working of the examples given.

THE ONE PER CENT TABLE.

In using this Table, when the interest found has to be multiplied so as to obtain interest at some other rate per cent, it is necessary to take two or more places of decimals, as shown in the examples, so as to get accurate results. The following are examples 1, 2, 3 and 4, already given, using the 1 per cent. table. The solutions by the "One page—One rate" Tables are repeated for convenience of reference.

No. 1. \$379 for 17 days at 6 per cent.

(By 6 per cent. Table.)

\$300—85.0 cents.

70—19.83

9—2.55

107.38 or \$1.07

(By 1 per cent. Table.)

\$300—14.17

70—3.30

9—0.42

17.89

6

107.34 or \$1.07

No. 2. \$7654 for 11 days at 7 per cent.

(By 7 per cent. Table.)

\$7000—1497.2

600—128.33

50—10.69

8. What is the interest on \$300 for 25 days at 3 per cent?

There are three ways in which this may be done:

1. Take the interest from the 1 per cent. Table and multiply by 3.
2. Multiply the principal by 3 and take the interest as given in the 1 per cent. Table on \$900.
3. Multiply the time by 3, and take the interest for 75 days (2m. 15d.) on \$300, as given in the 1 per cent.

Table C is a very easily understood table. It is intended to take the place in banks and offices of the tables computed on the basis of 365 days to the year, and is used as follows:

Example 1. The interest at 6 per cent. on \$5,000 for 29 days, figured on the basis of 360 days to the year, is \$29. What would it have been if the computation had been made on the basis of 365 days to the year? Look at the "Too Much" Table, and opposite \$29 and under "Too much" you will find 40 cents, which, deducted from \$29, leaves \$28.60.

NOTE.—When the cents of the 360 interest exceed 50 cents, deduct for an extra dollar.

Example 2. The interest on \$7000 for 19 days at 10 per cent. (360 basis) is \$36.94. How much is it on the 365 basis?

Opposite \$37 and under "Too much" find 51 cents, which, deducted from \$36.94, leaves \$36.43.

Example 3. The interest on \$5000 for 29 days at 7 per cent. is \$45.11 (360 basis). How much should it be on the 365 basis?

Opposite \$45 and under "Too much" find 63 cents, which, subtracted from \$45.11, leaves \$44.49.

Table A will be found by all office men to be a very useful Table.

It gives the product of every simple fraction from 1-2 to 8-9ths on any number from 1 to 1000000.

It is constructed much on the same principle as the Interest Tables, as will be seen by an examination of the Tables.

Look at the line for 2-7.

2-7ths of 100000 is	28571
10000 is	2857.1
1000 is	285.71
100 is	28.571
10 is	2.8571
2 is	.28571

The following examples will show how the Table is to be used:

1. What is 2-5ths of half a million of dollars?

Opposite 2-5ths and under 500000 find \$200,000.

2. How much is 5-6ths of 93750?

Opposite 5-6ths and under 90000—75000.

Table B is similar in its construction to Table A. It gives the product of any mixed number from $1\frac{1}{4}$ to $9\frac{3}{4}$ (including all the quarters) on any number from 1 to 9999.

This table is given not so much for any material aid it will render, it being an easy thing to multiply by any of the nine figures and fourths, but is given rather for the purpose of showing those who have to deal with fractional numbers, difficult to handle, how to form Tables for their own use.

The following examples will illustrate the use of the table, and then the manner of constructing and using such Tables hereinafter given will be better understood:

1. What is the cost of 7538 articles at $3\frac{3}{4}$ cents?

Opposite $3\frac{3}{4}$ and under 7000 find	26250
500	1875
30	112.5
6	32.5
	<hr/>
	282.60

2. Multiply 597 by $8\frac{3}{4}$.

Opposite $8\frac{3}{4}$ and under 500 find	4375
90	787.5
7	61.25
	<hr/>
	5223.75

3. Multiply 897 by $4\frac{3}{4}$.

Opposite $4\frac{3}{4}$ and under 800 find	3800
90	427.5
7	33.25
	<hr/>
	4260.75

As an example of the method of constructing a Table similar to "B" for any special mixed number we take 5 and 7-16ths. 5 and 7-16ths is equivalent to 87-16ths, and 87-16ths reduced to a decimal is 5.4375, which is the first tabular number for 1000. The next for 2000 will of course be found by multiplying 5.4375 by 2. The next for 3000 is found by multiplying by 3 and so on, and in this way we have the following Table :

1000	2000	3000	4000	5000	6000	7000	8000	9000
54375	10875	16312.5	21750.	27187.5	32625.	38062.5	43500.	48937.5

Now suppose we want to find what 7895 articles, at 5 and 7-16 cents each, amount to, we have it as follows:

$$\begin{array}{r}
 7000-38062.5 \\
 800-4350. \\
 90-489.3 \\
 5-27.1 \\
